SLIDE

THE DUTCH WATERSLIDE EXPERIENCE

TubeSound Heavy Duty

If you want sound in your ride this is the best option, not just some music but real heavy bass to give you that disco feeling

2 powerful speakers will be placed in a cone on a stainless steel frame, the speakers will give a beautiful sound with a heavy bass for a real music experience. The speakers will be delivered as a system with an amplifier which is connected to a digital sound carrier. In the "stand alone" version the sound will be triggered by a sensor at the beginning of the cone, sensor is included in the price. 10 different sounds will be displayed as random, so it is not predictable which sound will come, sounds can be changed by switching the SD card.

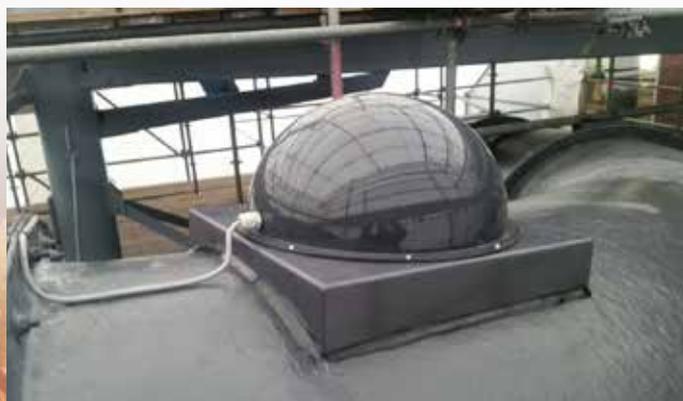

When an interactive slide controller will be connected with online content management, music scenes can be uploaded through internet and be chosen at the start of the slide.
